Taha Jahanbani

About Me

I'm a multidisciplinary creator working at the intersection of code, design, and engineering. My full name is Taha Jahanbani, born in Iran and currently based in Tehran. I specialize in full-stack web development, UI/UX design, industrial CAD modeling, and multilingual content production. My background spans programming (Python, C, SQL, JS, PHP), 3D design (SolidWorks, KeyShot), video editing (Premiere Pro), and hardware servicing. I'm currently taking the CS50xIran course and passionate about building digital experiences that are both technically sound and emotionally resonant. Whether it's a responsive website, a rendered prototype, or a multilingual brand story—I craft with clarity, precision, and purpose.
